Introduction To Coding Theory And Algebraic Geometry (Oberwolfach Seminars)

Synopsis

These notes are based on lectures given in the seminar on "Coding Theory and Algebraic Geometry" held at Schloss Mickeln, Diisseldorf, November 16-21, 1987. In 1982 Tsfasman, Vladut and Zink, using algebraic geometry and ideas of Goppa, constructed a sequence of codes that exceed the Gilbert-Varshamov bound. The result was considered sensational. Furthermore, it was surprising to see these unrelated areas of mathematics collaborating. The aim of this course is to give an introduction to coding theory and to sketch the ideas of algebraic geometry that led to the new result. Finally, a number of applications of these methods of algebraic geometry to coding theory are given. Since this is a new area, there are presently no references where one can find a more extensive treatment of all the material. However, both for algebraic geometry and for coding theory excellent textbooks are available. The combination of the two subjects can only be found in a number of survey papers. A book by C. Moreno with a complete treatment of this area is in preparation. We hope that these notes will stimulate further research and collaboration of algebraic geometers and coding theorists. G. van der Geer, J.H. van Lint Introduction to Coding Theory and Algebraic Geometry Part I -- Coding Theory Jacobus H. van Lint 11 1. Finite fields In this chapter we collect (without proof) the facts from the theory of finite fields that we shall need in this course.

Book Information

Series: Oberwolfach Seminars (Book 12)

Paperback: 85 pages

Publisher: Birkh f user; 1988 edition (October 26, 1989)

Language: English

ISBN-10: 3764322306

ISBN-13: 978-3764322304

Product Dimensions: 6.7 x 0.2 x 9.6 inches

Shipping Weight: 7 ounces (View shipping rates and policies)
