My School In The Rain Forest: How Children Attend School Around The World

Synopsis

At a school that sits on the edge of the Sahara, students are learning to speak English from a teacher who stands in front of a Webcam in North America. These students are learning in a virtual classroom. In another part of the world, kids aren't waiting to ride the bus to school; they are waiting to hop in a boat that will take them to a school that floats on a river. And some kids don't mind heights, especially those who attend a school on the slope of a mountain in the Himalayas, in one of the most remote corners of the earth. Margriet Ruurs contacted teachers and volunteers, many of whom took cameras in hand to photograph their schools and students. In this lively photo-essay, readers get to know students; from the arid plains of southern Afghanistan to the rain forests of Guatemala; who are pursuing their dreams of a brighter future.

Book Information

Lexile Measure: 960L (What's this?)

Hardcover: 32 pages

Publisher: Boyds Mills Press (September 1, 2009)

Language: English

ISBN-10: 1590786017

ISBN-13: 978-1590786017

Product Dimensions: 0.5 x 10.2 x 9.2 inches

Shipping Weight: 13.6 ounces (View shipping rates and policies)

Average Customer Review: 4.5 out of 5 stars See all reviews (8 customer reviews)

Age Range: 7 - 9 years

Grade Level: 2 - 4

Customer Reviews

Join Margriet Ruurs for a trip around the world to see the wide variation in school facilities and resources to which some children have access. The reader can learn about children attending school behind a wall in Afghanistan, Cambodian children who paddle their own small boats to a floating school, students in a remote Indian village who sit on a roof-less dirt floor for their lessons, and Nepalese children who attend a boarding school high in the Himalayas. Not only does a

country's general level of economic development play a role in the type and quality of schooling to which children have access, but parental preferences can also determine if children are home-schooled, go away to boarding school, rely on the internet for distance learning, use public transportation to get to school, or attend school in a more unusual setting. This book provides a refreshing look at school resources and emphasizes the importance of getting an education no matter where in the world one lives.

The concept of this book works well for teaching about diversity in the daily life of children around the world. The 13 schools are each given a two-page spread with color photos and a text box showing a map of the region with the particular country shown in a box, a picture of the country's flag, and about five sentences about the country itself. Readers learn about students who live far from a population center using computers to connect with teachers, students who are home-schooled, students who paddle small boats from home to a larger boat that serves as their school, and students whose schools are monasteries and castles. A couple issues with the book struck me immediately: the title, "My School in the Rain Forest," seems to indicate that the book is solely about one school in the rain forest, which it is not. The subtitle, "How Children Attend School Around the World," is a better representation of the book's contents. Also, there are two mistakes relating to country maps. The world map at the beginning of the book correctly shows the countries that include the schools being discussed, but on the two-page spreads, Afghanistan and Myanmar are incorrectly labelled in the box. This lack of editing brings my original rating of 4 stars to 3.

"My School in the Rain Forest" (part of the Boyds Mills Press 'How Children Attend School Around the World' series) is a nonfiction hardcover book with color photos that teaches students age 7-9 about children going to school all over the world. There are pictures and chapters about children in school in Scotland, Egypt, Afghanistan, Nepal, Cambodia, Guatemala, Kenya, India, Myanmar, Malaysia, Australia, and the United States. A handy map in the introduction shows where all these children live on the globe. Each country has an informative insert that gives pertinent data such as the country's capital, estimated population, flag, and description of its past and present, plus languages spoken in the country. Children travel in many different ways to attend their schools. Some go by boat, some even attend school on a ship. Others walk, or attend the School of the Air or virtual school on computer. Some go to school in a jungle, or under a tree. All children learn, and learning in different settings and different languages is a fascinating subject. "My School in the Rainforest" will appeal to children age 7-9.

When I gave "My School in the Rain Forest" to my grandson (age 10) for his birthday, along with other gifts, he looked through it quickly and said he would be taking it to school as he knew his teacher would also love it. After he read it, he did take it to school, and the whole class was able to enjoy this wonderful, entertaining, and informative book.

This book provides a nice introduction to the variety of different ways that students go to school. It was fascinating to read about schools on boats, over the radio, in a monastery, etc. The book focuses on the schools themselves rather than on the children. I would have liked more information about the students, but overall it provides a glimpse into the variety of ways the world has found to educate her children.

A great good for your world literature collection. It gives a wonderful picture of schooling for young learners in other parts of the world.

Got this for our grand daughter. It's a great introduction to different cultures and schools. Very nice book.

A wonderful book-- highly recommended!
